    Solvent resistant gloves

(Contd. on page 4)
The glove material has to be impermeable and resistant to the product/substance/preparation.
Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation

- **Material of gloves**
  The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

- **Penetration time of glove material**
  The exact break trough time has to be found out by the manufacturer of the protective gloves and has to be observed.

- **For the permanent contact of a maximum of 15 minutes gloves made of the following materials are suitable:**
  - Butyl rubber, BR

- **Eye protection:**
  Before use, put on the protective goggles and cover the patient's eyes to protect against splashes of material.

- **Body protection:** Light weight protective clothing
